

ABSTRACT

Method of processing photographs in a photographic laboratory by means of a photographic processing system, comprising the steps of:

receiving customer orders and processing information respectively assigned to said customer orders, each customer order comprising at least one photographic image, controlling the processing of a customer order in accordance with an assigned processing information; checking each processing information to ascertain whether or not the processing information may be automatically processed by said processing system and identifying those customer orders which are to be processed according to a non-automatically processable processing information.
